

How can I Reduce the Signs of Ageing?

Yes it is true - we cannot stop the ageing process, but we can slow it down and erase its trail.

Fine lines, age spots, sagging and devitalised skin, enlarged pores, uneven textures and tones are just some of the common concerns skin care therapists come across day to day. The good part though is that all of these concerns have a solution.

Prescribed SkinCare

The most common and essential part to age management is professionally prescribed skin care. Md Formulations Total age protector SPF 30+ and Piori's Smooth Lines are your first step in prevention and treatment. Without age prevention, correction is slow and "never-ending." MDF's SPF 30+ containing zinc oxide provides the widest coverage for UVB and UVA protection. Piori's Smooth Lines contains Idebenone, the worlds leading and strongest antioxidant available, which protects against environmental ageing such as UV light, pollution, smoking and stress.

Light Therapy

In conjunction with a leading product range, we have fantastic results with natural Light Therapy. A non invasive, 30 minute, Light Therapy treatment will help reduce the appearance of the visible signs of skin ageing naturally by stimulating your collagen and elastin production from within. This non-surgical light helps to minimise visible fine lines and wrinkles by helping to naturally plump the skin.

Light Therapy does not generate heat and requires no recovery time. Suitable for both men and women, this treatment is usually paired with professional salon facials to gain maximum results, refreshed and healthier looking skin. In simple terms, Light Therapy is like a deeper massage for the area of the skin that a therapists hands can't reach, working to help plump the skin naturally – similar to how photosynthesis works in plants. The whole treatment, particularly when combined with a specialised facial, is an amazing relaxing experience.

Microdermabrasion

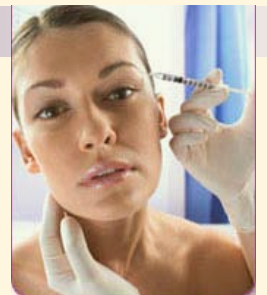

Microdermabrasion is a controlled resurfacing treatment which gently uses crystals accelerated onto the skin to remove layers of dead and damaged skin cells.

This will minimise the appearance of fine lines and uneven textures and tones. A treatment which provides immediate brilliance to the skin but is best performed as a course of six. This 30 min treatment involves a skin cleanse, crystal exfoliation and application of an intense leave on treatment mask.

Non-Surgical Cosmetic Injectables

Another area of age management would be treatment with BOTOX®. At BeautyWell®, we provide treatments especially for the crow's feet, frown lines, lifting the eyebrow and the lines around the mouth. BOTOX® is a safe purified protein which relaxes the muscle causing the wrinkle. Results are natural looking and obvious within 7-14 days. Most people resume normal activities immediately following a treatment and discomfort is minimal. A specialised doctor administers the tiny injections and takes about 10 minutes to complete and to maintain only needs to be repeated 2-3 times per year.

With the technology available today it is quite obvious that you CAN live without and Reduce the Visible Signs of Skin Ageing.

Speak to your skin care therapist about a programme that would suit you best.
